

# 99-353

## SolidWorks Project

To complete the micro, you must create a 3D part in SolidWorks and then create the part using the laser cutter. You must upload a short description of the part in a Word document by Sunday night (9/10). One paragraph is probably enough. You can include images if that would help me understand your plans. I will send you an email either approving your part or asking for some modifications.

If you don't have anything in particular that you want to make, I have several projects that we could use in IDeATe lending.

Sept 10 midnight: Upload project proposal

Sept 16: Show me in class what you have done so far. We can talk about materials that you need to complete the project.

Oct 13: Final project due. Upload a SolidWorks and DXF files and a picture to Canvas. Show me the physical part.
